

ACETI

CELLAR MATERIAL AND LABORATORY PRODUCTS

CHARACTERISTICS

We have an entire range of small equipment and laboratory products for quality control and to follow your acetic fermentations.

As well as a complete range of equipment to work in the cellar.

We can perform any type of wine analysis before and during vinegar production:

- Amount of residual alcohol in vinegars
- Acetic acid content of vinegars
- Amount of free and total SO₂ according to Frantz Paul's method

Do not hesitate to contact us to select the equipment or product better adapted to your needs.
